Improvement of housing energy performance level of public buildings through introducing innovative technologies and solutions in Estonia and Pskov region

SaveSmart ER15

Summary of the Project

“SaveSmart” will support improvement of housing energy performance level in Estonia and Pskov regions through introducing new technologies and solutions in order to encourage public sector to adopt a more environment-friendly level of behaviour.

Project will work on increasing awareness of public sector authorities, specialists and general public in Estonia and Pskov region, Russia, about most innovative energy saving possibilities and energy-efficient housing.

Standard energy saving solutions and recommendations for renovation of different types of public houses will be worked out.

Two reconstructed public houses in Estonia and two in Pskov region will be introduced as practical showcases of energy efficiency.
